

Code, Compile & Contribute!

A simple way to become part of revolution..

14th November, 2009

Kartik Mistry <kartik@debian.org>

What is Linux?

Wrong question, dude!

What is Free Software?

Ah, and OpenSource funda?

Get the source

It is easy

```
apt-get source <package>
```

Homepage: [field](#)

[wget](#)

You know [letmegooglegoforyou..](#)

Read The Fine Manual

RTFM, Read The Fine Manual

Upstream sites - most of good project will have good amount of documentation, manpage and even code is readable!

ASK

ASK for Help, Don't be shy!

Compile

Now what is this?

Again..

RTFM, Ask, Compile..

Find problem(s)

And, again RTFM, Ask, Compile

Now, easy part..

Fix it!

What we love..

Users are getting involved in development.
That shows that project has reached very
well into community.

Examples.

What we don't love..

I'm serious.

No knowledge that something like Google exists.

No asking.

No friendly way.

Contribution is easy!

Harder part is: to start it!!

Student?

Best way to start it!

I don't need to give example!!

The last slide

Just do it.

May the source with you.

Questions?

OK. Another one!
