

Medical imaging using Debian

How Debian Med could enhance your medical imaging experience

Andreas Tille & Mathieu Malaterre

Debian

LSM, Geneva, 9. July 2012

- Demonstration

3 Summary

Top 10 Uploaders of Debian Med team

Top 10 People discussing on Debian Med mailing list

Top 10 bug hunters of Debian Med packages

Top 10 committers to Debian Med VCS

Number of Packages in selected tasks

Healthy growth

- After some stagnation in the beginning growth in all measures
- Warning: Also the amount of own work is growing (even if work is split on more shoulders)
- Trying to attract even more upstream developers because these are the experts (*Mentoring of Month (MoM)*)
- Making Debian (Med) so attractive that users in medical care can not resist using it

3 Summary

Types of imaging applications

- Medical image viewers for general practitioners

ginkgocadx | aeskulap | amide | dicomscope

- Bioimaging, volume rendering

gofigure2, imagevis3d, itkssnap, volview

- Neurology

ants, caret, fslview, mrtrix, voxbo

- Tomography

ctsim, odin, plastimatch

- Scanning Probe Microscopy

gwyddion

- Image analysis / Simulation

slicer, sofa-apps

- Image format conversion tools (DICOM, MINC, NIfTI)

biosig-tools, dicom3tools, medcon, mriconvert

Types of imaging applications

Example: ginkgocadx

Medical Imaging Software and complete DICOM Viewer providing a complete DICOM viewer solution with advanced capabilities and support for extensions.

- Easy and customisable interface through profiles.
- Full featured DICOM image visualisation.
- Multiple modalities support (Neurological, Radiological, Dermatological, Ophthalmological, Ultrasound, Endoscopy, . . .)
- Dicomization support from JPEG, PNG, GIF and TIFF.
- Full EMH integration support: HL7 standard and IHE compliant workflows.
- PACS Workstation (C-FIND, C-MOVE, C-STORE...)
- Extensible through custom extensions

Example: ginkgocadx

3 Summary

Several development libraries

- General

cimg-dev, gmic, libcv-dev, libvtk5-dev

- Biomedical data manipulation

libbiosig-dev, libgdf-dev

- Image format creation and conversion

libmdc2-dev, libminc-dev, libnifti-dev

- Specialised application development:

- Image-guided surgery: *Libigstk4-dev*

- Registration and segmentation: *libinsighttoolkit3-dev*

- Solving EEG and MEG problems: *libopenmeeg-dev*

- Programming languages: Python, C, C++, C#

Several development libraries

3 Summary

Goal

- Integrate all Free Software with relevance for medical imaging into Debian
- Contact to upstream developers of such applications
- Support for users of these applications
- Debian Med as missing link between users and upstream developers

Goal

- Integrate all Free Software with relevance for medical imaging into Debian
- Contact to upstream developers of such applications
