

Why running a Blend?

Debian Med as a success story for other Blends

Debian Pure Blend for medical care and microbiological research

Goal of Debian Med

- *Debian Med is a sustainable way to distribute medical FLOSS to the user*
- *Debian is the distribution of choice for people working in medical care and microbiological research*

Goal of Debian Med

- *Debian Med is a sustainable way to distribute medical FLOSS to the user*
- *Debian is the distribution of choice for people working in medical care and microbiological research*

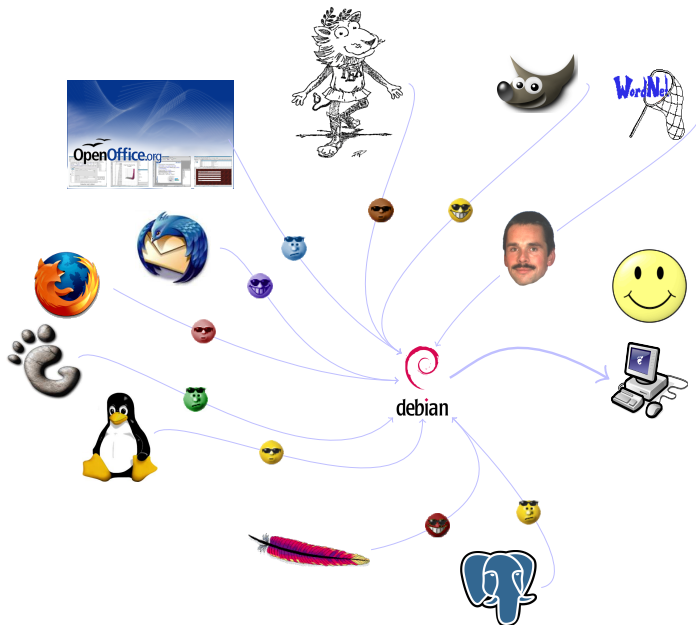

Goal of $\${BLEND}$

- $\${BLEND}$ *is a sustainable way to distribute $\${BLENDSCOPE}$ FLOSS to the user*
- *Debian is the distribution of choice for people working in $\${BLENDSCOPE}$*

Relation to derivatives

- Provide great preconditions for derivatives straight inside Debian (example BioLinux)
 - Using Debian Med VCS
 - Join common sprints
 - Finally profit from common work via Ubuntu detour
- Good options are unfortunately widely ignored by derivatives (example OSGeo)
 - Ubuntu derivative trying to get a full toolchain of open source geospatial software
 - Does not proactively interact with Debian
 - Seems to have no idea about relevant Debian teams like debian-java (but should)
- It's not only the derivers fault that options are not realised (example: Debian Junior died)

Relation to derivatives

Purpose of Blends

- Making a certain topic "hot"
- Attract users of the specific working field interested in Debian
- Teach users & developers how to work together with Debian (via Blend team)

*A Blend is a way to advertise Debian
in a specific work field*

Why considering Debian Med a model?

- One of the first Blends
- Medical software collection has bad chances to survive
→ but it did
- Shows how to form a team based on specific topic
- Pushes Debian into a field of dominant proprietary software

*Turn Debian into the distribution
of choice for all medical fields*

Why considering Debian Med a model?

Blends tools and formalisms invented in Debian Med

- General creation of metapackages based on tasks files (*blends-dev*; generalised from Debian Edu)
- Web sentinel based on same tasks files
 - *tasks*
 - *bugs*
 - *thermometer* (generalised from Debian GIS)
- Handling of scientific citations
- Subsectioning of *DDPO pages* according to tasks
- Making use of *UDD* for several purposes (web sentinel, citations, prospective packages in VCS, upload + bugs statistics)
- *Debian Med policy*
- *Mentoring of Month*
- *Sponsering of Blends*

Subject: Looking for a Debian packager for FIS-GT.M:
Change the History of Healthcare!!

Dear Debian packagers:

We are looking for one of you to help
us change the history of Healthcare

We are working at OSEHRA (<http://www.osehra.org/>) on
building an Open Source environment for VistA, the
Electronic Health Records system of the US Department
of Veterans Affairs.

VistA is the best proven EHR, and it has been used for
the last 30 years at the VA. It currently runs about
170 VA hospitals and about 1,000 ambulatory facilities.

...

Subject: Happy birthday Debian Med and announcement of MOM

...To ensure that this development of a strong team will continue I would like to propose a new effort I would like to call

Mentoring Of the Month" (MOM)

In this program I would like to dedicate a part of my spare time to a newcomer (the "student") providing any packaging knowledge I have to enable him working more or less independently on packaging after passing this MOM period. I like to guide the student kindly into all secrets of Debian packaging at the example of a specific program which is in the focus of the Debian Med team. The student is free to pick the package however, ...

Debian Med is good for Debian

According to a questionnaire in Wiki

- Debian Med has 23 DDs+DMs
- 10 DDs *because* Debian Med exists;
4 DDs before Debian Med started
- 7 out of the 10 above extended their activity to other fields in Debian
- 8 out of the 10 above are active in Debian Med

problem from yesterday*

Meetings

- Charts have shown an increase of active developers and general activities since yearly sprint meetings are happening
- For the moment the Sprints are only done in the Biology branch
- Ratio between Debian developers to developers & users of bioinformatics software was about 1:5
- By closely working together with our users we have won new developers (one per Sprint)

→ *Previous users start realising that they can take influence by becoming a developer.
Yes, you can really join Debian!*

Thanks for supporting Sprints which we have proven to be successful

Healthy growth

- After some stagnation in the beginning growth in all measures
- Warning: Also the amount of own work is growing (even if work is split on more shoulders)
- Strategy: Making Blends tools even more attractive to
 - make Debian Med more attractive to users + developers
 - make Blends more attractive for teams inside Debian
