R packaging BoF
Andreas Tille
DebConf 18
Hsinchu, 29. July 2018
Team

Waking up in the morning and realising that somebody else has solved your problem from yesterday

dh-r

- Replacing cdbs module
- Providing more comfortable interface
- Generating dependencies automatically
- Testsuite: autopkgtest-pkg-r
- Autopkgtest dependencies are added as Recommends
- Enables running the test suite on normal installations

dh-make-R / dh-update-R

- Creating / updating R packages nearly 100% automatically
- We can try right now if you know some R package which is not yet packaged
- dh-make-R creates a debian/ dir which is nearly ready to upload
- Also not yet packaged dependencies are prepared the same way if not yet ITPed

routine-update

- Script to run when there is a new upstream release
- Calls uscan to fetch new version
- Injects new version, updates packaging (Vcs fields, Standards-Version, debhelper)
- Calls dh-update-R which even prepares new dependencies if needed
- Hint: In case you want to fix something inside the package without a new upstream version existing call routine-update -force (otherwise routine-update stops when there is no new upstream version)

itp_from_debian_dir

- If you want to ITP a package this provides the text of the ITP bug ready for copying.

Information about new packages and open bugs

- Updated twice a day showing recent new packages and open bugs
- Drained from public UDD clone (currently offline)
Open issue

- `<r-exclude-doc`
- Removal of docs including compressed JS
- Does anybody know how to recreate those docs??
