

## Debian Teams exchange

Andreas Tille

Debian

Busan, 30. July 2024

1 / 7

- Originally packages were literally *owned* by their maintainer
- At DebConf3 Teams were suggested, since DebConf5 Uploaders
- Both quickly adopted in Debian Med and other Blends
- At DebConf8 I realised: Hard to specify who is in the team
- Solved for DebConf11 with GSoC Teammetrics

2 / 7

## Types of teams

- Content driven teams - frequently Blends
- Infrastructure teams (installer, dpkg, apt)
- Language teams

3 / 7

## Composition of teams

- Well staffed, more than one member can handle issues
- Multiple members but reaching limits
- Growing teams
- Shrinking teams
- (Basically) one member team
- Single maintainers

4 / 7

## Culture in teams

- Every member can and should upload every team package
- Few members care for everything, others only for specific packages
- Uploader cares for specific packages, others will contribute randomly
- Team wide automatic packaging upgrades in Git (Janitor)

5 / 7

## Actively inviting and teaching

- Mentoring of the Month (teaching upstream and users)
- Sprints in common with upstream and users
- Participating in GSoC + Outreachy
- Sponsoring of Blends

6 / 7

## In case you want to run your own team stats

There is a download script

master ▾ teammetrics / admin / download\_database.sh

 **download\_database.sh**  182 bytes

```
1 #!/bin/sh -e
2
3 rsync -a -P \
4   blends.debian.net:/var/backups/teammetrics/teammetrics.0.xz .
5 dropdb teammetrics || true
6 createdb teammetrics
7 xzcat teammetrics.0.xz | psql teammetrics
```

The database enables you to do more fine grained investigation  
of your team
